Action of cortisone on the penetration of radioactive phosphorus into red blood cells *in vitro*. D. Jurek, M. Jurek, and J. D. Kenters (*Bull. U. S. Nat. Bur. Health* 1954, 53, 211, No. 7). RBCs in the form of a suspension of defibrinated blood, or a suspension of the cells in distilled water with cortisone (1:25 and 1:100) at 37°C. for 15 min. ³²P in the form of Na₂H₂P₂O₇ · 12H₂O was added. The uptake was found to be about 20% less than in the control. It was assumed to be due to the effect of cortisone on the permeability of the cell membrane.

"Shock and Insufficiency of Peripheral Blood Circulation."

Belgrade, Medicinski Glasnik, Vol 17, No 5, May 1963, pp 175-178.

Abstract: [Author's Serbocroatian summary modified] A diagnosis of shock is appropriate if symptoms and underlying causes are evident and if hypotension exists with systolic pressure under 80 mm Hg. Treatment of shock should be directed as far as possible against the underlying cause, e.g., substitution for fluid lost. Vaso-pressor amines are useful when the decline in pressure has resulted from lowered resistance and can also be useful in hypovolemic shock after the fluid lost has been compensated for.

Comparative characterization of buffalo meat and beef in their action on gastric secretion of a dog. M. L. Kentiyan (Zootech.-Vet. Inst., Erevan). *Voprosy Pitaniya* 12, No. 3, 30-7 (1953).—The latent period of gastric secretion is longer in feeding the dogs with various preps. of buffalo meat than with beef products; the total amt. of secretion shows the same variation, but the digestive potency of the juice is higher with buffalo-meat diet than with beef. Total acidity of the juice and the free HCl content are lower with buffalo-meat diet than with beef. G. M. Kosolapoff

POJONAI, Andras, Dr. KENYERES, Imre, Dr; Medical University of Budapest, Forensic Medical Institute (Budapesti Orvostudományi Egyetem, Legszag-
szaki Orvostani Intézet)

"Diagnostic Problems of Sudden Death Due to Unclear Abdominal
Catastrophes Especially in Geriatric Cases."

Budapest, Orvosi Hetilap, Vol 104, No 5, 3 Feb 63, pages 211-213.

Abstract: ^{Hungarian} [Authors' summary] Based on 50 cases of sudden death due to
undiagnosed abdominal diseases the authors point out that the symptoms
are often less specific in the aged. They stress the role of chronic
changes in acute abdominal catastrophes and the susceptibility of the
aged patient to acute circulatory insufficiency. They conclude that
such sudden deaths often appear to be due to negligence on the part of
the physician. In judging the professional competence of the physician
the other misleading symptoms in the aged must be kept in mind.

TITLE: Heavy monoatomic gas model and unsteady thermalization of neutrons in lead

SOURCE: Atomnaya energiya, v. 19, no. 3, 1965, 296-297

TOPIC TAGS: neutron scattering, nuclear model, lead, thermal neutron, Debye temperature

ABSTRACT: Neutron scattering in lead can satisfactorily be described in the framework of the heavy monoatomic gas model, since lead, having a large mass, has a low Debye temperature. Calculations are carried out of the average velocity of neutrons in lead in the range of slowing-down times where the spectrum is close to maxwellian, and results are compared with previous experiments. Deviation at small time values can be explained by the presence of higher energy harmonics; at larger times, discrete characteristic values are not present, even in the first harmonic. This result shows that the effect associated with the finiteness of the limit of the attenuation time constant is significant only at sufficiently large times. The author thanks M. V. Kazarnovskiy for his constant attention and valuable advice. Thanks is also given to Z. P. Mukhin and A. T. Matachun for carrying-out of the numerical calculations. Orig. art. has: 1 figure and 3 formulas. [NA]

TITLE: About some estimates in approximate integration

PERIODICAL: Referativnyy zhurnal. Matematika, no. 10, 1962,
35-36, abstract 10V173 (Tr. I-y Nauchn. konferentsii matem.
kafedr. ped. in-tov Povolzh'ya, 1960. Kuybyshev, 1961,
80 - 86)

TEXT: In the theory of quadratures the following problem is known:
A class of functions $H_n(0,1)$ and the natural number n are given. Among

all those quadrature formulas $\int_0^1 f(x)dx = \sum_{k=1}^n p_k f(\xi_k)$ (1) that are

determined by the weight $p_k > 0$ and by the nodes $0 < \xi_1 < \xi_2 < \dots < \xi_n < 1$
it is required to find one such that

Card 1/5

About some estimates in approximate ...

S/044/62/000/010/028/042
B108/B102

$$\epsilon_n = \sup_{f \in H} \left| \int_0^1 f(x) dx - \sum_{k=1}^n p_k f(x_k) \right|$$

is a minimum. The author considers specific cases of this problem for a class of functions $W^{(r)}_{\omega}(0,1)$ defined in the interval $[0,1]$ and satisfying the condition

$$|f^{(r)}(x_2) - f^{(r)}(x_1)| \leq \omega(|x_2 - x_1|).$$

The continuous function $\omega(x)$ has the property

$$0 \leq \omega(x_2) - \omega(x_1) \leq \omega(x_2 - x_1) \text{ for } 0 \leq x_1 < x_2 \leq 1.$$

The following theorems are demonstrated:

(1) If $f(x) \in W^{(0)}_{\omega}(0,1)$ and if n is a given natural number, then the best among the quadrature formula: (1) is that which can be determined by the nodes

Card 2,5

About some estimates is approximate ...

$\Delta_n = \frac{2k-1}{2n}$ and by the weights $p_k^* = 1/n$, and where

$$\Delta_n^* = \min_{k, p_k} \Delta_n = 2n \int_0^{1/2n} \omega(t) dt.$$

(2) The inequality $\Delta_n < n \int_0^{1/n} \omega(t) dt$

holds true for a class of functions $w^{(0)}_{H_\omega(0,1)}$ at each $p_k = 1/n$ and for any system of nodes $x_{k-1} < x_k$. (3) If $f(x) \in w^{(1)}_{H_\omega(0,1)}$, the best among those quadrature formulas (1) that are exact for a linear function whose nodes are related to the weights by the condition

$\xi_k = \frac{x_{k-1} + x_k}{2}$ is the one which can be determined by the weights

Card 3/5

About some estimates in approximate ... S/044/62/000/010/028/042
B108/B102

$p_k^* = 1/n$ and for which

$$\Delta_n^* = \min \Delta_n = 2n \int_0^{1/2n} dx \int_0^x \omega(t) dt.$$

(4) For a class of functions $J_0^{(0)} H_n(0,1)$ satisfying the additional condition $f(0) = 0$, the best quadrature formula is that which can be determined by the nodes $\xi_k^* = \frac{2k}{2n+1}$ and by the weights $p_k^* = \frac{2}{2n+1}$, $k = 1, \dots, n$, and for which

$$\Delta_n^* = \sup_f \left| \int_0^1 f(x) dx - \frac{2}{2n+1} \sum_{k=1}^n f\left(\frac{2k}{2n+1}\right) \right| = (2n+1) \int_0^{\frac{1}{2n+1}} \omega(t) dt.$$

(5) Following S. M. Nikol'skiy (RZhMat, 1959, 2538K), the author gives the approximate quadrature formula $\int_0^1 f(x) dx \approx \frac{1}{6} \sum_{k=1}^6 f(\xi_k)$ which is exact

for third-degree polynomials, and which can be determined by the weights

$p_k = p = 1/6$ and by the nodes $\xi_1 = \frac{1}{3}p$, $\xi_2 = p + \frac{2}{3}p$, $\xi_3 = 2p + \frac{2}{3}p$,
 $\xi_4 = 3p + \frac{1}{3}p$, $\xi_5 = 4p + \frac{1}{3}p$, $\xi_6 = 5p + \frac{2}{3}p$. [Abstracter's note: Complete

TITLE: Application of Radioisotopes in Wear Testing ¹⁹ ₂₀

PERIODICAL: Energia és Atomtechnika, 1960, Vol. 13, No. 12, pp. 563-570

TEXT: This is a synopsis of numerous publications on engine wear testing and on progress made therein by the application of radiotracers. Conventional measuring methods (measurement of weight loss, of changes of dimensions, of special markings, analysis of abrasion products in lubricating oil) are described, and their shortcomings are pointed out. The principle of the tracer method is explained according to Guest's book (Ref. 3), and its advantages are pointed out. The preparation of the test specimen by alloying with radioactive metals (formula of Wissotsky-Savelskiy, Ref. 4), by electroplating, by the insertion of tracer inserts (Fig. according to P. Y. Dyachenko and D. Y. Nyisnyevich, Ref. 10), by activation in the atomic pile (measurements of J. H. Deterding and J. R. B. Calow, Ref. 6), and by subsequent activation and analysis of the

abrasion products (W. W. Schultz and co-workers, Ref. 7). The measuring setup is illustrated by a drawing of Dyachenko and Nyisnyevich (Ref. 10), and the necessary precautions for radiation protection are recommended. Autoradiography is applied for detecting the character of engine wear. J. Fodor, one of the authors of the present article, published a paper on this subject in Energia és Atomtechnika May 1959 (Ref. 8). At the Tocha Research Institute of the Soviet Academy of Sciences, the wear on tool tips was thus traced back to the granular structure of the tips, the refinement of which led to an increased service life of the tool tips. The authors conclude that no general conclusions have so far been drawn from research on wear by the tracer method. The most modern testing method was presented in 1959 by Deterding and Calow who measured wear on piston rings of automotive engines in road service with a scintillation counter and recording equipment. In Hungary, joint tests were conducted on tires by the Radioisotope Laboratory of Csepel and the Research Laboratory for the Rubber Industry. The Csilleberts Research reactor, put into operation in 1959, took care of the activation of tool tips for the Csepel Radioisotope Laboratory and of the activation of piston rings for the

Filtration of aerosols through fiber filters. Krastibek
Kepak and Zenon Starčuk (Inst. Nuclear Research, Prague).
Jaderna energie 6, 94-5 (1960).—The study is connected with
the filtration of aerosols produced in the evapn. of radio-
active wastes. The efficiency of glass fibers of mean diam.
20, 15, 6, and 3 μ , and basalt fibers of mean diam. 23 μ , was
studied for an aerosol produced by spraying a 0.1% Na_2HPO_4 soln. into a current of steam and heating on a metal
cylinder held at 170°. The flow rate was 32 cm./sec. and
the temp. after filtration approx. 130°. The P_2O_5 content
was photometrically detd. before and after filtration by
means of the blue phosphomolybdate complex. Detns. were
carried out for different amts. of Na_2HPO_4 soln. sprayed;
the mean particle size, detd. with an optical microscope,
and the no. of particles increased with the amt. sprayed.
The efficiency of filtration, measured by the sepn. factor,
was inversely proportional to the fiber diam. and directly
proportional to the P_2O_5 content before filtration. The
pressure loss increased with decreasing fiber diam. The
basalt fiber of 23 μ diam. was better than the glass fiber of
15 μ diam.

Abstract: Abstract of a paper concerning the sorption of radio-isotopes P^{32} and S^{35} in the form of phosphate and sulfate anions on barium sulfate, barium carbonate, natural baryte, and hydrated aluminum, ferric, and zinc-aluminum oxides. The paper describes the sorption mechanism. Hydrated oxides are suitable sorbents for both anions; barium sulfate is an effective sorbent for micro-concentrations of both anions; barium carbonate is less suitable for the decontamination of phosphate and sulfate anions from aqueous solutions.

TITLE: Sorption properties of ionic precipitates and hydrated oxides used in the sorption of P-32, P-35 and I-131 from aqueous solutions

SOURCE: Jaderna energie, no. 4, 1965, 125-128

TOPIC TAGS: sorption, aqueous solution, chemical precipitation, inorganic oxide, metal compound, hydration, hydroxy group, phosphorus, iodine

ABSTRACT: This article is a review of the literature on the sorption of phosphate, sulfate, iodide and iodate ions on ionic precipitates and insoluble metal hydroxides or hydrated oxides. The mechanisms of sorption on the two types of sorbents are discussed. The results obtained indicate that the ionic precipitates and hydrated oxides may assure an effective sorption of P-32, P-35 and I-131 in the form of phosphate, sulfate, iodide and iodate anions from aqueous solutions.
